

```

        string getColor();
    }

    public class Rectangle implements Shape, Color {
        @Override
        public void draw() {
            System.out.println("Draw " + this.getColor() + "
            rectangle");
        }
        @Override
        public string getColor() {
            return "red";
        }
    }

```

Bài tập:

Chúng ta có interface Mail chứa các method sendMail(), log().
 Class MailImpl sẽ implements Mail và triển khai các method
 mà Mail khai báo.

```

    public
    public interface Mail {
        void sendMail();
        System.out.println("
    }

```

```

void log() {
    System.out.println("
}

}

public class MailImpl implements Mail {
    @Override
    public void sendMail() {
        System.out.println("Dang gui mail...");
    }
    @Override
    public void log() {
        System.out.println("Dang ghi log...");
    }
}

public class Main {
    public static void main(String[] args) {
        MailImpl m1 = new MailImpl();
        m1.sendMail();
        m1.log();
    }
}

```

Bài tập 2:

```
public interface Shape {  
    void getArea();  
    void getPerimeter();  
}  
  
public class Rectangle(1) implements Shape {  
    @Override  
    public void getArea(int int width, int length) {  
        System.out.println("Diện T  
    private int width;  
    private int height;  
    public Rectangle(int width, int height) {  
        this.width = width;  
        this.height = height;  
    }  
    public void setSize(int width, int height) {  
        this.width = width;  
        this.height = height;  
    }  
    @Override  
    public void getArea(int width, int height) {
```

```

        System.out.println("Diện tích " + (width * height));
    }
    @Override
    public getPerimeter() {
        return (width + height) * 2;
    }
    @Override
    public isSquare() {
        return width == height;
    }
}

```

```

public class Circle(1) implements Shape {
    @Override
    public void getArea()
    private int width;
    private int height;
}
public class Circle implements Shape {
    @Override:
    public void getArea (int width, int height) {
        System.out.println("Diện tích (2 * MATH.PI * R)");
    }
}

```
